Accessories

FTA supplies a complete range of precision-engineered tools, dies, and accessories supporting blank plate production, embossing operations, and plate affixation processes. Designed for durability, accuracy, and seamless compatibility with FTA machines, these solutions ensure consistent performance, operational efficiency, and long service life.

Clapper Dies

FTA's Clapper Dies are designed for easy operation, zero maintenance, and long service life, making them ideal for high-volume licence plate embossing. Each character contour is sharply defined even at relatively low operating pressure, ensuring a superior and consistent finish.

Available in **Industrial-grade Aluminium** for maximum durability and extended operational life, the dies are machined using high-precision, computer-controlled VMC machining. They are also offered in **Industrial-grade moulded plastic** for lightweight handling and cost-effective large-scale production.

The accurately matched **Male-female dies,** VMC machined to precise dimensions, are capable of embossing registration numbers in **single-row or two-row formats** in one seamless operation, ensuring higher efficiency.

All dies are customized to region/country-specific font and size compliance requirements.

Clapper Die Tray / Templates

FTA's Embossing Tray / Template is precisely engineered for perfect compatibility and reliable performance. The clapper dies are securely mounted and locked into the integrated steel rail using a ball-catch mechanism, allowing convenient side adjustment whenever required.

Manufactured from **Industrial-grade Aluminium** or **high-strength nylon**, the tray/template is robust, durable, and flexibly designed to handle both **single-line and double-line** licence plates with ease.
